plustek
Image Solution Provider

Plustek OpticFilm 7200
Higher resolution, offering more possibilities...

The Plustek OpticFilm 7200 is a 7200 dpi film scanner capable of scanning 35 mm slide and negatives. High optical resolution, USB 2.0 connection and fast scan speed allow Plustek's OpticFilm 7200 to easily outperform other professional film scanners.

The Plustek OpticFilm 7200 is the perfect scanner for photographers and small office/workshop users, offering a variety of possibilities including high quality images for magazines and other printed material, photo enlargements, brochures, digitizing slides/negatives, web pages, as well as images to share with friends on the Internet, and more!

The Plustek OpticFilm 7200 provides 48-bit scanning capability that supports recognition of literally trillions of different colours. The result is extremely accurate colour rendition compared to the original film, retaining subtle details in the highlight and shadow areas of the scanned image.

Plustek OpticFilm 7200

Higher resolution, offering more possibilities...

Higher Resolution, More options

Scanning at 7200 dpi, you have the potential to turn a 135 slide (3.5 x 2.3 cm) into a printing quality A1 poster (84 x 55.2 cm). OpticFilm 7200 is an excellent solution for magazines and other printed material. Compared to digital cameras, this film scanner has more than a 68-Mega-pixel capability, easily overwhelming popular digital cameras. For home and leisure usage, you can scan your images and share them on the web with fellow photographers. You can create e-cards, or simply send your images via email to friends and family.

Illuminated Slide Viewer

Located on top of the scanner, the illuminated slide viewer provides an excellent tool to preview the slide before scanning. For negative films, simply place the film holder above the illuminate viewer to ensure the frame's correct orientation. Furthermore, the illuminated viewer can be a perfect helper for further digital file touch up.

Film Holder

Two film holders are provided. One is for mounted slides, holding up to four slides. The other is for filmstrip, holding a piece of filmstrip, up to 6 frames. Thanks to the film holder, the media are well protected and there is no physical contact with the media during scanning. The film holder can be inserted on either side of the scanner, making scanning very user-friendly.
